**AWS:**

Unfortunately, we didn't have enough time to get AWS up and running, as many of us had other subjects to focus on.

**Documentation:**

All required documentation for this submission can be found in our GitHub repository, under the `docs` folder in the root directory, except for meeting minutes, which are accessible via Notion. A list of implemented functionality can be found in the GitHub milestone.

All meeting minutes can be found in Notion under the Meeting Notes tab on the sidebar. There are also backups of some other documents here, including our Sprint 2 retro, however we unfortunately ran into some space issues with Notion, and have had to archive some documents externally.

We have archived these extra documents in .zip files on our MS Teams channel, linked above.

One such .zip file is called SEPT Old Docs. This .zip contains most of the relevant Milestone 1 documents. We have also included a .zip file called milestone2.zip, which contains submission documents for this milestone.
